

# Ocean Cargo Management

**Supply chain management for medium-sized to large companies that is broad in scope and easy to implement.**

## Visibility on order/item level

Ocean Cargo Management offers customers real-time visibility all the way through to order and item level as well as management of transactions starting with vendor booking right down to delivery to consignee.

It is a global standardized web-based service that can be quickly implemented and includes services such as booking pre-alerts, consolidations of smaller orders from multiple suppliers into dedicated single consignee shipments as well as coordination of all transportation arrangements. All services are managed through a single point of contact and result in a single invoice for both Ocean and Cargo Management services.

# A boost to productivity

A streamlined standardized service that allows you to spend less time handling logistics and more on running your business.

## Save time — save money

- Reap the benefits of purchase order visibility from vendor booking through to destination;
- Pass on responsibility for document collection from vendors and distribution as necessary at destination;
- Monitor shipment via web track and trace
- Streamline processes through optimally managed partner activities.

## Forward-looking management for every phase

- Correct discrepancies at origin through system validation to allow for rerouting and other eventualities;
- Get cargo released at destination a.s.a.p.;
- Keep involved partners automatically informed throughout;
- Allow partners to plan optimally using real-time information;
- Save time by processing only one invoice.

**Full transparency &  
data evaluation**

**Maximum productivity**

**Minimum cost**

**Optimized supplier  
management**

**Single point of contact**
