# Common Pain Points In The Industry

## Lack of Visibility

When risks are not readily apparent, potential dangers are harder to identify and correct. This leads to heightened exposure to harm that could have been avoided.

## Reactive Decision Making

If risks are not identified early on, they lead to problems down the road. In doing so, decisions can only be made after the fact and become lagging indicators of the true risk profile on site.

## Direct & Indirect Costs

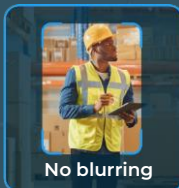

Constricted risk management not only results in heightened direct injury expenses, such as escalated insurance premiums and fines, but also plays a substantial role in elevating lost-time rates and adversely impacting overall employee morale.

# Privacy & Security

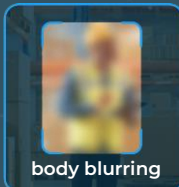

Protex AI is built from the ground up to meet the PII requirements of enterprise customers.

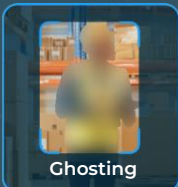

No blurring

Facial blurring

body blurring

Ghosting

## De-identification

We give you a range of options to de-identify all CCTV footage.

Camera System  
NVR / DVR / Server

Protex Edge Device  
(on-prem processing)

Protex Cloud  
Backend (AWS)

## Edge computing

Using an edge computing device, footage is de-identified before it leaves your network (ensures GDPR compliance).

## Employee comms

We work closely with clients to ensure Protex AI is well received by employees.

# Thank You!

Scott Cahill, Enterprise Lead
