

OEM TIRE LOGISTICS

Customized to meet the specific tire delivery needs of each vehicle production plant

The arrival of tires into a plant impacts the overall vehicle manufacturing process. OEMs need a lean supply chain – with pull triggers, just-in-time deliveries, and low in-transit inventory – but must avoid line stoppages. There's minimal margin for error.

TYPICAL BUSINESS CHALLENGES

- Optimally locating each warehouse
- Ensuring on-time delivery
- Maintaining accuracy & quality
- Managing returns
- Minimizing logistics cost-per-unit

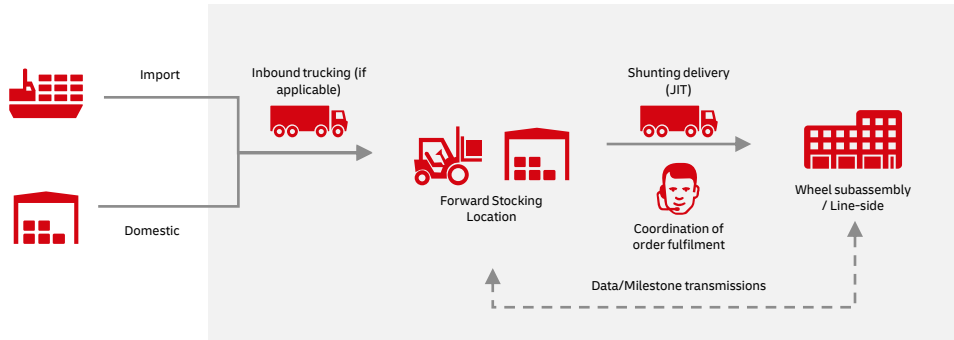

DHL SOLUTION

Solution design starts with a comprehensive understanding of the requirements of each OEM plant. Then tire delivery logistics can be customized according to these needs. This ensures a perfect fit with existing lean logistics and JIT practices, and helps to avoid line stoppages during production.

SOLVING YOUR BUSINESS CHALLENGES

- ✓ **Optimally locating each warehouse** – Site selection for a storage facility includes careful consideration of plant proximity, easy access (traffic risk minimization), and local regulations
- ✓ **Ensuring on-time delivery** – Establish a pull trigger system to meet the most demanding order delivery schedules and avoid any line stoppages; constant review of shunting truck efficiency
- ✓ **Maintaining accuracy & quality** – Technology enables inventory and order accuracy (the right SKU, quantity, production date, and first-in, first-out) while ensuring damage-free tires
- ✓ **Managing returns** – Effective processes to manage returns and obsolescent products for recycling or allocation to other markets
- ✓ **Minimizing logistics cost-per-unit** – Process engineering optimizes space usage and improves picking productivity; robotics and automation boost productivity; warehouses and resources can be shared with other parts suppliers

SOLUTION DESIGN IS CUSTOMIZED TO MEET THE SPECIFIC NEEDS OF EACH PLANT

OEM TIRE LOGISTICS

KEY BENEFITS FOR YOUR BUSINESS

PEACE OF MIND

Risks and penalties minimized through specialized expertise and experience

TECH-DRIVEN

Relevant warehouse management system and scanning capabilities

STREAMLINED PROCESS

Standardized for smooth and fast tire delivery

BEST PRACTICE

Shared specialist knowledge in DHL's global tire community
