DHL FLEXITANKS
AN INNOVATIVE NON-HAZARDOUS BULK LIQUID TRANSPORTATION SOLUTION
DHL Flexitanks consist of a bag in a box that forms a tank in a container. DHL Flexitanks are a multi-layer bladder designed to fit into a 20 foot standard ocean container, effectively turning it into the equivalent of an ISO Tank container for the transportation of bulk, non-hazardous liquids. It is an excellent alternative to ISO tanks, IBC totes and drums. By the use of a Flexitank in a 20ft Dry Van container, the payload increases by 30% in comparison with drums and IBC’s.

DHL Flexitanks offer a safe, streamlined, and more environmentally friendly way of reducing transportation costs for non-hazardous liquids. DHL’s Flexitank solutions overcome the problems associated with traditional methods of shipping non-hazardous liquids in large volumes.

### KEY FEATURES

- **Multi-layer bladder**
  that holds up to 24,000 liters and fits into a standard 20ft ocean freight container

- **Safe, streamlined and more environmentally friendly**
  way of reducing transportation costs for non-hazardous liquids

- **First class coverage** provided at a minimum of $5 million per single Flexitank

- **Recyclable** product that is single use only

### YOUR BENEFITS

- Our experienced central dedicated team can identify the correct Flexitank for you

- We have a strong partnership with SGS, the world’s leading inspection, verification, testing and certification company on a worldwide basis. SGS provides the Flexitank expertise, quality control and Flexitank fitting

- **Minimize freight charges**, as you will only pay one-way international freight cost, since there is no need to return the Flexitank

- **Enjoy an all-inclusive service**, as DHL offers a complete Flexitank service, from selling and fitting the Flexitank to handling end-to-end logistics

- **Reduce your cleaning costs and ‘GoGreen’**
  with Flexitanks that can either be disposed or recycled, eliminating expensive cleaning procedures that harm the environment
THE DHL FLEXITANK SOLUTION

HOW DHL FLEXITANKS WORK

1. Depending on the region and specific customer needs, we source Flexitanks from SGS and our leading suppliers across the globe. We have a strong partnership with SGS on a worldwide basis. SGS provides the Flexitank expertise, quality control and Flexitank fitting.

2. A suitable container is selected, and the Flexitank fitted at a location (your site, a DHL location, or selected DHL fitting depot at the port) to meet your specific shipping needs. Cargo is collected from your site and transported via road or rail to the port of export.

3. The Flexitank-fitted container is shipped to its destination using our ocean freight services.

4. Customs clearance is obtained at the shipment’s destination.

5. Cargo is loaded and shipped via road or rail to its final destination.

6. A Flexitank is a single use product. It can be disposed or recycled by DHL or ours partners.
