

Fuel Surcharge model for products:

DHL Road Freight Standard, DHL Road Freight Priority,
Standard Pallet International, Premium Pallet International

The fuel surcharge is added to the base transport price (which does not include the cost of additional services). The surcharge level is determined based on the average market prices of diesel fuel using the net price published by:

- PKN Orlen (<https://www.orken.pl/pl/dla-biznesu/hurtowe-ceny-paliw>)¹
- EU Weekly Oil Bulletin (https://energy.ec.europa.eu/data-and-analysis/weekly-oil-bulletin_en).

Due to the volatility of fuel prices, the fuel surcharge may be increased or decreased. The current surcharge level is published with adequate advance notice.

To calculate the fuel surcharge for a following week, a weighted average is applied, in which:

- 75% represents EU Weekly Oil Bulletin index
- 25% represents PKN Orlen index

The final fuel surcharge result is rounded up mathematically to the nearest value with an accuracy of 0.5 percentage point.

DHL Freight (Poland) Sp. z o.o. reserves the right to change the methodology of the fuel surcharge calculation.

¹ From 1 March to 31 October, the average market price of Ekodiesel fuel is used; during the remaining period (1 November to 28 February), the average market price of Arctic Diesel 2 is applied

DHL – Excellence. Simply delivered.

Fuel Surcharge model for products: DHL Road Freight Direct

The fuel surcharge is added to the base transport price (which does not include the cost of additional services). The surcharge level is determined based on the average market prices of diesel fuel² using the net price published by PKN Orlen (<https://www.ornen.pl/pl/dla-biznesu/hurtowe-ceny-paliw>). Due to the volatility of fuel prices, the fuel surcharge may be increased or decreased. The current surcharge level is published with adequate advance notice.

To calculate the fuel surcharge for DHL Road Freight Direct product, the average fuel price from the previous week is compared with the average fuel price from the base period (August 2021), assuming that the fuel cost in August 2021 represented 25% of the overall transport cost. The result is rounded up to the nearest 0.25 percentage point.

$$FSk = (FPt / FPb - 1) * CPb$$

where:

FSk – fuel surcharge rate for the applicable week;

FPt – average net fuel price from the previous week;

FPb – average net fuel price in the base month (PKN Orlen data) amounting to 4.249PLN

CPb – 25% share of fuel cost in the total transport cost in the base period.

DHL Freight (Poland) Sp. z o.o. reserves the right to change the methodology of the fuel surcharge calculation.

² From 1 March to 31 October, the average market price of Ekodiesel fuel is used; during the remaining period (1 November to 28 February), the average market price of Arctic Diesel 2 is applied
