INTERNATIONAL AIR FREIGHT FUEL SURCHARGES

DHL Global Forwarding U.S. Airfreight's Fuel Surcharge is based on a proprietary methodology to accurately model and assess airline fuel surcharges against our widely diversified use of carrier partners in our network footprint.

Surcharge	Effective Date	Minimum	Rate per KG	Currency
Current Fuel Surcharge	May 15, 2023	\$10	\$1.05/kg	USD

What is it?

DGF Airfreight US Fuel Surcharge is a fuel surcharge that gets applied to all of DGF customers with shipments originating in the USA for international air export.

It is a separate charge from freight charges to ensure variable jet fuel market adjustments can be accommodated without impacting freight rates.

How is it calculated?

The DGF Airfreight US fuel surcharge methodology is based on a proprietary model that considers many factors including all airline partners fuel surcharges and DGF's use of each carrier partner in our network footprint.

Our model is not limited to calendar frequency (e.g. only monthly/weekly updates) but rather is driven by every change in the market.

When these changes are accumulated and it is determined that the overall market has fluctuated significantly enough, the DGF fuel surcharge will be adjusted accordingly, either increased or decreased in relation to the market.
