

GOGREEN CLIMATE PROTECTION PROJECT:

LANDFILL PROJECT, SANTA MARTA, CHILE

Project description

The project “Santa Marta Landfill Gas (LFG) Capture for Electricity Generation Project” is a landfill gas to energy project developed by Consorcio Santa Marta S.A. The proposed activity involves the collection and utilization of the LFG for generation of electricity. Santa Marta landfill is an existing and operational landfill site. It is located 17 km south of Santiago city and started its operation in 2002. It is one of the most important landfills in the region, serves a population of around 1,200,000 inhabitants corresponding to the southern communes of Santiago.

PROJECT: LANDFILL PROJECT, SANTA MARTA, CHILE

Project standard	Goldstandard VER 3976
Project type	Biogas – Electricity
Technology focus	Landfill Gas
Location	Chile
Project scale	Large
Supported SDGs	3, 4, 7, 8, 9, 13
